FLOW CHART

FLOWCHART / PROCESS AS DIAGRAM

Flow headline: turn the process into one picture

Make the invisible process explicit with nodes, arrows and loop-backs.

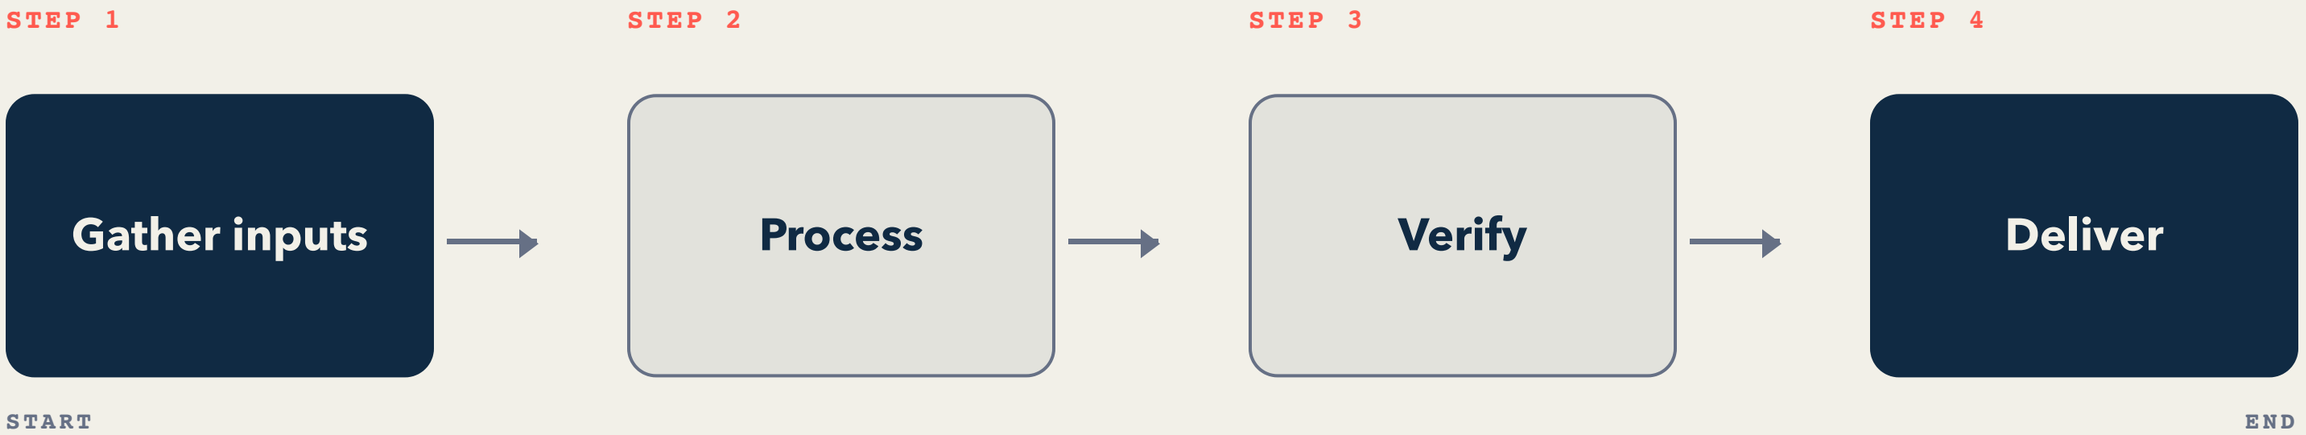

01 — 05

NODES · BRANCHES · LOOPS

FLOW / PIPELINE

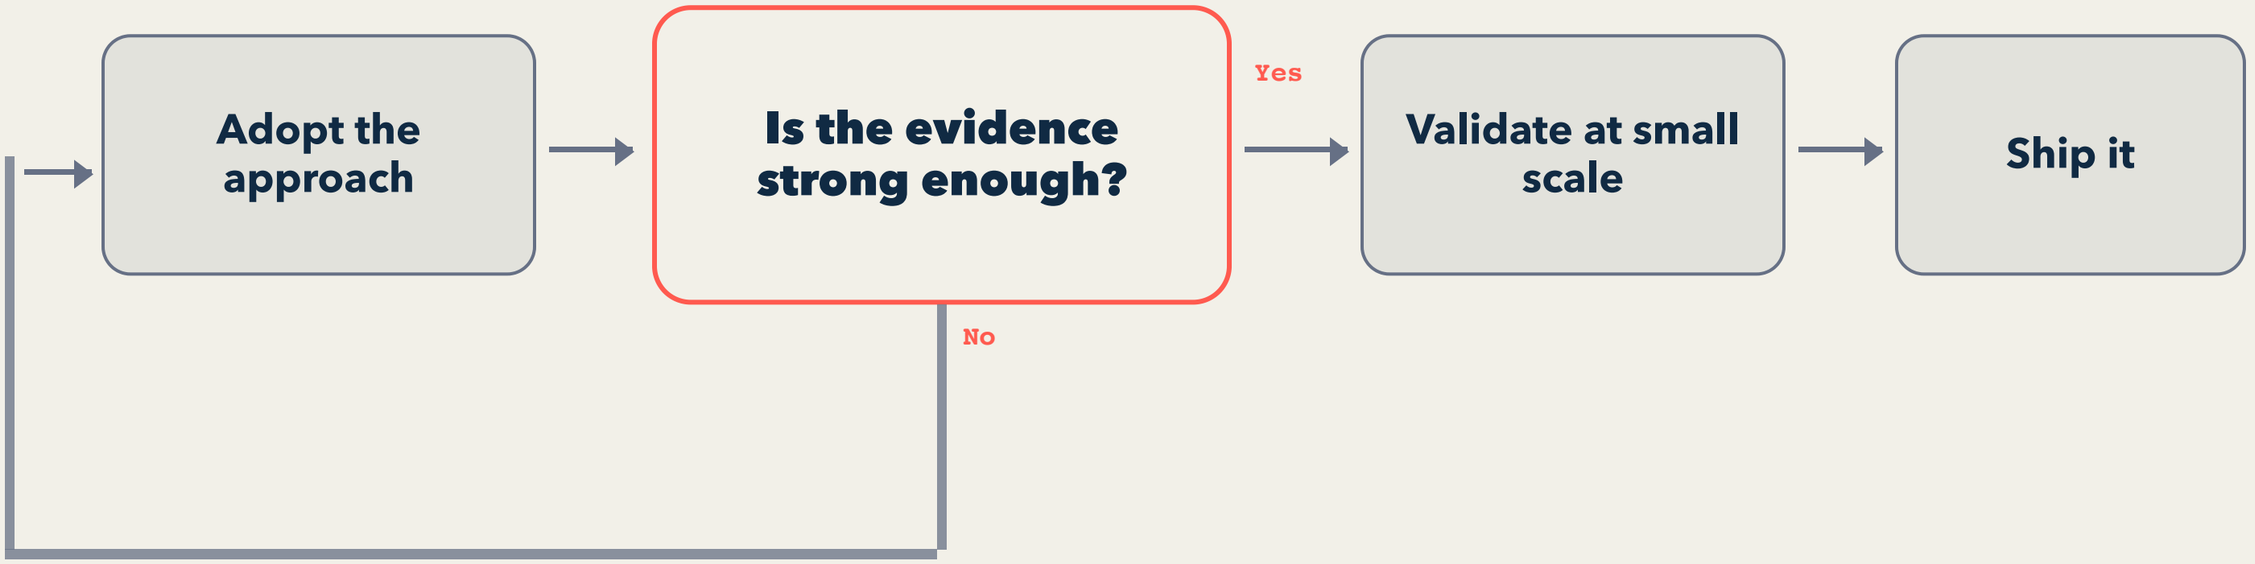

Four steps, one glance

> Every step needs explicit inputs and outputs.

FLOW / BRANCH + LOOP-BACK

Branch and loop back: make the failure path visible

If it fails, return to the previous step and strengthen the evidence.

> Draw the “no” exit on the diagram instead of hiding it.

Four disciplines for drawing a process

01
One question per diagram
A single diagram answers a single question; split extra pipelines onto more pages.

02
Draw every exit
Failure, rejection and boundary paths matter as much as the happy path.

03
Loops need stopping rules
Each cycle should reduce uncertainty and say when to stop.

TAKEAWAY / ONE SENTENCE

When the process is drawn clearly, disagreement fades on its own.

Next: reuse the pipeline and branch pages in this template with your real steps.
